Course

PI1 - Practical Informatics 1

Version: 2 | Last Change: 10.09.2019 15:49 | Draft: 0 | Status: vom verantwortlichen Dozent freigegeben

General information

Long name	Practical Informatics 1
Approving CModule	PI1 BaET
Responsible	Prof. Dr. Dieter Rosenthal Professor Fakultät IME
Level	Bachelor
Semester in the year	winter semester
Duration	Semester
Hours in self-study	60
ECTS	5
Professors	Prof. Dr. Dieter Rosenthal Professor Fakultät IME Ursula Derichs
	Lehrkraft für besondere Aufgaben
Requirements	none
Language	German
Separate final exam	Yes

Final exam

Details

Written exam:

Students shall prove that they can 1.) explain and apply fundamental terms, 2.) apply programming and more abstract concepts to solve application problems and 3.) assess the correctness of proposed solutions. Typical types of assignments are 1.) multiple choice questions, fill-in-the-blank texts, assessment of statements, 2.) solving given problems of limited size by programs and Nassi-Shneiderman diagrams and 3.) finding errors in given programs.

Minimum standard

At least 50% of the total number of points.

Exam Type

Written exam:

Students shall prove that they can 1.) explain and apply fundamental terms, 2.) apply programming and more abstract concepts to solve application problems and 3.) assess the correctness of proposed solutions. Typical types of assignments are 1.) multiple choice questions, fill-in-the-blank texts, assessment of statements, 2.) solving given problems of limited size by programs and Nassi-Shneiderman diagrams and 3.) finding errors in given programs.

Lecture / Exercises

Learning goals

abstract representation

Nassi-Shneiderman diagrams

flow charts

Knowledge	
algorithms	
characteristics of algorithms	
description of algorithms	
digital computers	
bits/bytes	
structure of the hard- and software architecture	
basic concepts of programming	
high-level programming languages vs. machine languages	
compilation vs. interpretation	
procedural vs. object-oriented languages: C vs. C++	
procedural vs. object-oriented languages: C vs. C++ basic concepts of variables	
basic concepts of variables	
basic concepts of variables scalar data types in C	
basic concepts of variables scalar data types in C numbers	
basic concepts of variables scalar data types in C numbers value ranges	
basic concepts of variables scalar data types in C numbers value ranges representation of constants	
basic concepts of variables scalar data types in C numbers value ranges representation of constants operations	
basic concepts of variables scalar data types in C numbers value ranges representation of constants operations characters	
basic concepts of variables scalar data types in C numbers value ranges representation of constants operations characters coding standards: ASCII, Unicode	
basic concepts of variables scalar data types in C numbers value ranges representation of constants operations characters coding standards: ASCII, Unicode operations	
basic concepts of variables scalar data types in C numbers value ranges representation of constants operations characters coding standards: ASCII, Unicode operations character strings	

conditional statements		
if		
if-else		
switch-case		
loops		
pre-test loops

Learning goals		
Knowledge		
programming elementary operations on scalar variables		
programming with control structures (including the design of Nassi-Shneiderman diagrams or flow charts)		
programming with structured data, esp. arrays		
Skills		
working with a software development environment		
finding and correcting errors in programs		
designing algorithms and implementing them in a higher language		
application of the aspects listed above to real-world scenarios in small teams		
Expenditure classroom teaching		
Туре	Attendance (h/Wk.)	
Practical training	1	
Tutorial (voluntary)	0	
Separate exam		

Exam Type

working on practical scenarion (e.g. in a lab)

Details

Students work in small teams. Each team completes multiple "rounds" with assigned appointments in the lab. In each round, programming assignments of an algorithmic and object-oriented nature are solved - firstly by a more abstract representation (e.g. description of an algorithm by a Nassi-Shneiderman diagram), secondly by an runnable implementation (e.g.

C-program).

For the preparation of a laboratory appointment a "preparation sheet" has to be solved. The acquired knowledge will be tested at the beginning of the appointment (short written entrance test, interview with the supervisor). In case of failure, a follow-up appointment must be taken; in case of multiple failures, the student will be excluded from the lab. In case of success, a "laboratory work sheet" with further tasks will be worked on under supervision (and, if necessary, with assistance).

Minimum standard

Successful participation in all laboratory appointments, i.e. in particular independent solution (or with some assistance if necessary) of the programming assignments.
