

# TH Köln

# Course

# PI1 - Practical Informatics 1

Version: 2 | Last Change: 01.08.2019 16:59 | Draft: 0 | Status: vom verantwortlichen Dozent freigegeben

# General information

Long name	Practical Informatics 1
Approving CModule	PI1 BaTIN
Responsible	Prof. Dr. Cartsten Vogt Professor Fakultät IME
Level	Bachelor
Semester in the year	winter semester
Duration	Semester
Hours in self-study	60
ECTS	5
Professors	Prof. Dr. Cartsten Vogt Professor Fakultät IME
Requirements	none
Language	German
Separate final exam	Yes

### Final exam

#### **Details**

Written exam:

Students shall prove that they can 1.) explain and apply fundamental terms, 2.) apply programming and more abstract concepts to solve application problems and 3.) assess the correctness of proposed solutions. Typical types of assignments are 1.) multiple choice questions, fill-in-the-blank texts, assessment of statements, 2.) solving given problems of limited size by programs and Nassi-Shneiderman diagrams and 3.) finding errors in given programs.

#### Minimum standard

At least 50% of the total number of points.

### Exam Type

Written exam:

Students shall prove that they can 1.) explain and apply fundamental terms, 2.) apply programming and more abstract concepts to solve application problems and 3.) assess the correctness of proposed solutions. Typical types of assignments are 1.) multiple choice questions, fill-in-the-blank texts, assessment of statements, 2.) solving given problems of limited size by programs and Nassi-Shneiderman diagrams and 3.) finding errors in given programs.

## Lecture / Exercises

## Learning goals

## Knowledge

algorithms

characteristics of algorithms

description of algorithms

digital computers

bits/bytes

structure of the hard- and software architecture

basic concepts of programming

high-level programming languages vs. machine languages

compilation vs. interpretation

procedural vs. object-oriented languages: C vs. Java

basic concepts of variables

scalar data types in Java (and C)

numbers

value ranges

representation of constants

operations

characters

coding standards: ASCII, Unicode

operations

character strings

boolean values

representation of constants

operations

control structures in Java (und C)

abstract representation

Nassi-Shneiderman diagrams

flow charts

blocks

conditional statements			
if			
if-else			
switch-case			
loops			
pre-test loops			
for			
while			
post-test loops: do-while			
static methods in Java			
method definition			
header with parameters and return type			
body with return statement			
method call			
parameter passing: call by value vs. call by reference			
overloading			
storage classes			
arrays in Java			
storage organisation: references			
indexing and loops			
multi-dimensional arrays			
multi-ulinensional analys			
objects and classes in Java			
object-oriented programming: motivation and fundamental concepts			
encapsulation			
objects with members and methods			
classes			
constructors			
access control			
class members and methods			
Skills			
writing algorithms to solve given problems (in natural language and in graphical form - Nassi-Shneiderman diagrams, flow charts)			
programming with elementary operations in a higher programming language			
programming with control structures			
programming with control structures			
programming with methods			
programming with methods			
programming with structured data, esp. arrays			
programming with fundemental concepts of object-oriented programming (classes and objects)			

Expenditure classroom teaching

	Туре	Attendance (h/Wk.)				
	Lecture	2				
	Exercises (whole course)	1				
	Exercises (shared course)	1				
	Tutorial (voluntary)	0				
	Separate exam					
	none					
^	Practical training					
	Learning mode					
	Learning goals					
	Knowledge					
	programming elementary operations on scalar variables					
	programming with control structures (including the design of Nassi-Shneide	erman diagrams or flow charts)				
	programming with methods					
	programming with structured data, esp. arrays					
	Skills					
working with a software development environment  finding and correcting errors in programs  designing algorithms and implementing them in a higher language  application of the aspects listed above to real-world scenarios in small teams						
				Expenditure classroom teaching		

Attendance (h/Wk.)

Туре

Practical training	1	
Tutorial (voluntary)	0	

### Separate exam

### Exam Type

working on practical scenarion (e.g. in a lab)

#### Details

Students work in small teams. Each team completes multiple "rounds" with assigned appointments in the lab. In each round, programming assignments of an algorithmic and object-oriented nature are solved - firstly by a more abstract representation (e.g. description of an algorithm by a Nassi-Shneiderman diagram), secondly by an runnable implementation (e.g. Java program).

For the preparation of a laboratory appointment a "preparation sheet" has to be solved. The acquired knowledge will be tested at the beginning of the appointment (short written entrance test, interview with the supervisor). In case of failure, a follow-up appointment must be taken; in case of multiple failures, the student will be excluded from the lab. In case of success, a "laboratory work sheet" with further tasks will be worked on under supervision (and, if necessary, with assistance).

#### Minimum standard

Successful participation in all laboratory appointments, i.e. in particular independent solution (or with some assistance if necessary) of the programming assignments.
