

Faculty of Information, Media and Electrical Engineering

Master Media Technology PO3 Module Manual

Version: 3.6.2025-10-07-09-06-51.3cf29cd5

The most recent version of this handbook can be found here:

<https://f07-studieninfo.web.th-koeln.de/mhb/current/en/MaMT2020.html>

1. Program Description

The Master's degree course in Media Technology deepens your theoretical and practical knowledge of the development of complex media technologies under interdisciplinary conditions and should enable you to work scientifically and to apply and expand scientific knowledge. In addition to specialist skills, a key qualification is the ability to work successfully and efficiently in a team on complex technical tasks under interdisciplinary conditions.

Occupational fields and sectors

Media technology graduates can work in the field of research and development in many sectors. These include the broadcasting and telecommunications industry, audio and video technology, entertainment industry, internet companies, automotive industry, medical technology, industrial automation, surveillance technology, manufacturers of (special) cameras, multimedia technology, CAD and 3D application development, as well as research institutes. For example, you will work as a development and planning engineer or in research with the prospect of taking on management and project responsibility.

Course of study

The course extends over 3 semesters, whereby it is possible to start in both the winter and summer semesters. In the first two semesters, students take 6 different elective modules and 3 compulsory modules; the 3rd semester is reserved for the Master's thesis and the colloquium.

The degree program offers a broad spectrum of knowledge in the field of media technology, which is based on 3 specializations (see list on next page). This allows you to set individual priorities in your studies without restricting the necessary breadth. The modules from these 3 specializations are available for the elective modules, of which at least 3 must be selected. Further modules from the range offered by the technical faculties of TH Köln can also be selected. If desired, one of the 6 elective modules can come from a non-technical faculty. This allows you to round off your profile by incorporating interdisciplinary skills. Students can specialize and choose up to 2 major fields of study.

Students who have passed at least 3 elective modules in a specialization have successfully completed the specialization. However, students can also choose not to take a specialization and, for example, take 2 modules from different specializations.

A special feature of the course is the Master's project. Here you develop a sophisticated technical system in a group, from the project idea and conception to the realization, testing and acceptance of the system. Here you can combine your knowledge and skills from the various fields of media technology in a team and acquire skills in the area of project implementation and responsibility. The compulsory module "Applied Mathematics" must be taken by all students, as it teaches skills in the field of mathematics that go beyond those taught in the Bachelor's degree and which are necessary to achieve the study objectives in the field of scientific education.

The two compulsory modules "Master's main seminar" and "Master's project" are offered every semester. It has been shown in the past that this flexible arrangement is particularly advantageous for students who have obtained their Bachelor's degree at other universities in order to give them a good start to their studies. You will find the study plan on the next page.

Expectations of applicants

The Master's degree course in Media Technology is consecutive to the Bachelor's degree course of the same name. However, under certain conditions it is also open to graduates from other fields of study, e.g. computer science, physics or electrical engineering.

Even more so than on the Bachelor's degree course, you should have a high level of motivation and commitment to independently explore challenging topics in media technologies. This also requires you to work independently and enjoy getting to the bottom of complex issues.

2. Graduate Profile

Graduates of the M. Sc. Media Technology degree program are able to develop, research and manage media technology systems with scientific depth and an interdisciplinary approach. They take responsibility for innovations in research and industry, actively shape complex developments in the fields of audio, video, VR/AR, AI and embedded systems and qualify for management positions or an academic career. In contrast to the Bachelor's degree, the focus is on research skills, in-depth system development and management responsibility.

The Master's degree course in Media Technology builds consistently on the foundations acquired in the Bachelor's degree course, but systematically expands these with research-oriented, analytical and management skills. While the Bachelor's course provides a broad technical qualification with a strong application orientation, the Master's course focuses on scientific in-depth study, systemic complexity and the ability to shape innovations in a dynamic technological and social environment.

The focus is on:

- The independent handling of challenging technical issues,
- The ability to conduct scientifically sound research and development,
- The assumption of responsibility in interdisciplinary teams, projects and organizations.

Graduates of the degree program develop an individual profile in the following areas:

- They design, analyze and evaluate complex media technology systems incorporating the latest scientific findings and technologies (e.g. VR/AR, deep learning, image and signal processing, embedded systems, audiovisual coding).
- They are able to plan and implement technical systems taking into account ethical, social, ecological and economic aspects.
- They take on leadership and management tasks in interdisciplinary project teams and lead research and development projects.
- Through the Master's project, they acquire distinctive skills in the conception, realization and presentation of complex systems in a realistic project environment.
- They master scientific work at a high level and thus qualify for doctoral studies.
- Strong communication skills, intercultural sensitivity and the ability to organize themselves make them competent specialists and managers in an international environment.
- The Master's qualifies students for careers in research and development, technical management, software development, product management, media production, system integration and other areas of innovation - or for further academic qualifications.

3. Fields of Action

Central fields of activity in the degree program are development and design, research and innovation, leadership and management as well as quality assurance and testing. The profile module matrix shows which fields of activity are addressed by which modules.

Development and Design

Interdisciplinary development and testing of algorithms, circuits, software, devices, communication and media technology systems as well as complex computer, communication and embedded systems.

Research and innovation

Perform scientific research work and apply and expand scientific knowledge, from basic research to industrial research, with the qualification for doctoral studies.

Leadership and management

Assume technical leadership and project responsibility, including the coordination and management of working groups and internationally distributed teams, as well as the management of planning and manufacturing processes, project controlling and product management.

Quality assurance and testing

Carrying out quality controls and tests for products and processes, using measurement and testing technologies and coordinating certification processes.

4. Competencies

The modules of the degree program train students in different competencies, which are described below. The [Profile Module Matrix] (#Module Matrix) shows which competences are addressed by which modules.

Development and design of complex systems

Ability to design and implement large systems, taking into account electrical, software, mechanical and optical aspects, based on a thorough requirements analysis from a technical, economic, ecological and social point of view.

Testing and evaluation of complex systems

Plan, perform and analyze tests to verify and validate these systems, including consideration of user perspectives and technical-economic aspects.

Scientific work and research

Mastery and application of scientific methods, including the ability to research, evaluate and cite relevant literature, and to formulate and present results.

Project management and teamwork

Skills in organizing, managing and supervising projects and teams, even under uncertain conditions, and in making professional and organizational decisions.

Self-organization and self-taught skills

Identification of personal skills, efficient time management and the ability for self-directed learning.

Communication and intercultural competence

Ability to present and defend scientific and technical results convincingly in both German and English, including international and interdisciplinary contexts.

Technical and scientific fundamentals

Comprehensive and in-depth STEM subject knowledge and its application to real-world and theoretical problems.

Sustainability and social responsibility

Evaluate and develop sustainable and socially responsible technologies, including consideration of ethical values.

Analysis, simulation and abstraction

Ability to analyze complex systems, abstract key features and solve problems based on models.

Leadership and decision-making responsibility

Assume responsibility in technical management tasks, develop solution strategies for complex tasks.

Applying ethical values and principles in practice

Incorporating social and ethical considerations into technical decisions and design processes.

Integrative thinking and acting in interdisciplinary teams

Coordinating and integrating contributions from different disciplines to solve complex tasks.

Innovation and creativity

Developing new solutions and concepts to overcome technical challenges.

5. Study Plans

The following are studyable study plans. Other study plans are also possible. Please note, however, that each module is usually only offered once a year. Please also note that several modules may have to be selected in a particular semester and elective catalogs in order to obtain the total ECTS credit points shown.

5.1 Regelstudium Beginn Sommersemester, Masterprojekt im zweiten Semester

Sem.	Abbr.	Name	Catalog (WB) Elective Mandatory (PF)	ECTS
1	WMM	Wahlmodul	WB	15
	AMA	Angewandte Mathematik	PF	5
	SEM	Masterhauptseminar Medientechnologie	PF	10
2	WMM	Wahlmodul	WB	15
	MP	Masterprojekt	PF	15
3	MAA	Masterarbeit	PF	27
	KOLL	Kolloquium zur Masterarbeit	PF	3

5.2 Regelstudium Beginn Wintersemester, Masterprojekt im ersten Semester

Sem.	Abbr.	Name	Catalog (WB) Elective Mandatory (PF)	ECTS
1	WMM	Wahlmodul	WB	15
	MP	Masterprojekt	PF	15
2	WMM	Wahlmodul	WB	15
	AMA	Angewandte Mathematik	PF	5
	SEM	Masterhauptseminar Medientechnologie	PF	10
3	MAA	Masterarbeit	PF	27
	KOLL	Kolloquium zur Masterarbeit	PF	3

5.3 Regelstudium Beginn Sommersemester, Masterprojekt im ersten Semester

Sem.	Abbr.	Name	Catalog (WB) Elective Mandatory (PF)	ECTS
1	WMM	Wahlmodul	WB	10
	AMA	Angewandte Mathematik	PF	5
	MP	Masterprojekt	PF	15
2	WMM	Wahlmodul	WB	20
	SEM	Masterhauptseminar Medientechnologie	PF	10
3	MAA	Masterarbeit	PF	27
	KOLL	Kolloquium zur Masterarbeit	PF	3

5.4 Regelstudium Beginn Wintersemester, Masterprojekt im zweiten Semester

Sem.	Abbr.	Name	Catalog (WB) Elective Mandatory (PF)	ECTS
1	WMM	Wahlmodul	WB	20
	SEM	Masterhauptseminar Medientechnologie	PF	10
2	WMM	Wahlmodul	WB	10
	AMA	Angewandte Mathematik	PF	5
	MP	Masterprojekt	PF	15
3	MAA	Masterarbeit	PF	27
	KOLL	Kolloquium zur Masterarbeit	PF	3

6. Modules

The modules of the degree program are described below in alphabetical order.

6.1 AMA - Angewandte Mathematik

Module ID	AMA
Module Name	Angewandte Mathematik
Type of Module	Mandatory Module
Recognized Course	AMA - Applied Matheamtics
ECTS credits	5
Language	deutsch, englisch bei Bedarf
Duration of Module	1 Semester
Recommended Semester	1
Frequency of Course	every summer term
Module Coordinator	Prof. Dr. Stefan Grünvogel
Lecturer(s)	Prof. Dr. Stefan Grünvogel (Professor Fakultät IME)

Learning Outcome(s)

WAS:

Eine mathematische Beschreibung einer medientechnologischen Aufgabenstellung ableiten bzw. ein mathematisches Modell eines medientechnologischen Systems entwerfen.

WOMIT:

Durch Definition von Systemgrenzen sowie der Beschreibung mit Hilfe mathematischer Notation und formaler Sprache.

WOZU:

Um die Aufgabenstellung mit Hilfe mathematischer Algorithmen lösen zu können bzw. einer Simulation zu erstellen.

WAS:

Geeignete numerische Lösungs- bzw. Simulationsverfahren für ein gegebenes Problem (Simulation eines System, Lösen einer Aufgabenstellung) auswählen.

WOMIT:

Analyse und Kenntnisse der grundlegenden theoretischen Eigenschaften (Kondition, Stabilität, Rechenaufwand) mathematischer Algorithmen.

Die zugehörige Theorien und ihre Grenzen kennen und verstehen.

Selbstständiges

WOZU:

Um nach Wahl des Verfahrens das passende Softwaresystem auswählen zu können bzw. eigene numerische Verfahren zu implementieren.

WAS:

Numerische Verfahren zu Lösung für ein gegebenes Problem anwenden

WOMIT:

Verwendung von vorhandener Softwaresystemen und / oder Implementierung eigener numerischer Verfahren zu Lösung einer Aufgabenstellung.

WOZU:

Um letztendlich eine die Aufgabenstellung zu lösen um damit zu wissenschaftliche Erkenntnisse zu gelangen oder komplexe Medientechnologien zu entwickeln.

WAS:

Bewertung und Dokumentation der Ergebnisse der numerischer Verfahren.

WOMIT:

Eine Bewertung der Ergebnisse basiert auf den Kenntnissen der Eigenschaften der verwendeten Algorithmen (Kondition, Stabilität, Rechenaufwand). Zur Dokumentation wird die mathematische korrekte Notation und formale Sprache verwendet.

WOZU:

Um die erlangten wissenschaftlichen Erkenntnisse bzw. Lösungen richtig einzuschätzen und in interdisziplinärem Kontext zu kommunizieren.

Module Contents**Seminar**

Knowledge of numerical mathematics is taught according to the Flipped Classroom concept.

Topics:

Numerics and error analysis
 Solving linear equations (direct, iterative)
 eigen vectors
 singular value decomposition
 solving nonlinear equations
 nonlinear least-squares
 optimization methods
 interpolation
 integration and differentiation
 numerical software

Project

Mathematical description of a complex media technology problem which requires at least the knowledge conveyed in the seminar part of the course in order to be solved.

Analysis of the problem and selection of a solution method based on this.

Selection of a software system or implementation of a corresponding algorithmic solution method.

Written documentation and critical evaluation of the results.

Explanation of the individual work steps

Teaching and Learning Methods

- Seminar
- Project

Examination Types with Weights

cf. exam regulations

Workload 150 Hours

Contact Hours 23 Hours $\pm$ 2 SWS

Self-Study 127 Hours

Recommended Prerequisites

The classical topics in engineering mathematics:
 - analysis of one and several variables (differentiation, integration, Taylor)
 - linear algebra (general vector spaces, linear mappings, matrices, vectors, norm, scalar product)

Mandatory Prerequisites

Recommended Literature

- Solomin: Numerical Algorithms, CRC Press
- Chapra, Canale: Numerical Methods for Engineers, McGraw-Hill
- Quarteroni, Saleri, Gervasio: Scientific Computing with MATLAB and Octave, Springer
- Dahmen, Reusken: Numerik für Ingenieure und Naturwissenschaftler, Springer
- Deufhard, Hohmann: Numerische Mathematik 1, de Gruyter

Included in Elective Catalog

Included in Specialization

Use of the Module in Other Study Programs

AMA in Master Medientechnologie PO4

Specifics and Notes

Last Update 19.7.2025, 14:32:16

6.2 ATM (HI) - Ausgewählte Themen der Medientechnologie

Module ID	ATM
Module Name	Ausgewählte Themen der Medientechnologie
Type of Module	Elective Modules
Recognized Course	HI - Haptic interfaces
ECTS credits	5
Language	deutsch, englisch bei Bedarf
Duration of Module	1 Semester
Recommended Semester	1-2
Frequency of Course	every winter term
Module Coordinator	Prof. Dr.-Ing. Arnulph Fuhrmann
Lecturer(s)	Dr. Civelek Turhan (wissenschaftlicher Mitarbeiter Fakultät IME)

Learning Outcome(s)

- Die Studierenden verstehen und erklären die haptische Wahrnehmung durch theoretische Konzepte und praktische Anwendungen, identifizieren Entwicklungsplattformen für haptische Anwendungen durch die Kombination von Theorie und Praxis, erkennen haptische Schnittstellenpositionen durch theoretisches Wissen und praktische Erfahrung und entwickeln immersive Virtual-Reality-Anwendungen mit haptischem Feedback.

- Die Studierenden sind in der Lage, Steuerungen für die Teleoperation zu identifizieren und zu implementieren, um eine zuverlässige Fernsteuerung von Geräten zu ermöglichen, Stabilitätsprobleme in VR- und Teleoperationssystemen zu beheben, Tests für die Benutzerwahrnehmung und das Feedback in haptischen Systemen und virtuellen Umgebungen zu entwickeln, Anwendungsbereiche haptischer Geräte in verschiedenen Bereichen wie Medizin, Spiele, Simulation und Rehabilitation zu erläutern, aktuelle VR- und Haptik-Technologien und ihre ethischen und sozialen Auswirkungen durch die Kombination von Theorie und kritischem Denken zu diskutieren, Haptik- und VR-Forschung zu bewerten, um Stärken, Schwächen und die Qualität der Forschung zu ermitteln, und Forschungspräsentationen zu haptischen Schnittstellen und virtueller Realität zu entwerfen.

WOMIT:

Die Kompetenzen werden zunächst über die Vorlesung durch die Dozenten vermittelt und danach im Praktikum anhand konkreter Aufgabenstellung von den Studierenden vertieft. Im Präsentationsteil der Lehrveranstaltung recherchieren die Studierenden anhand von Fachartikeln und anderen Informationsquellen neue Konzepte der virtuellen und erweiterten Realität mit Haptik zu vorgegebenen Themen und stellen diese in einer Präsentation vor.

WOZU:

Die sichere Anwendung der Grundlagen von Virtual Reality mit Haptik ist eine Voraussetzung für die Entwicklung komplexer interaktiver haptischer Anwendungen und Systeme. Darüber hinaus ermöglicht das Grundlagenwissen die Bewertung bestehender Systeme und wissenschaftlicher Arbeiten im Bereich der Haptik.

Module Contents**Lecture**

- | Description of input and output devices as well as specific hardware for haptic and virtual reality
- | Describe the areas of application of haptic devices, data structures and algorithms in VR applications.
- | Describing haptic user interfaces: Presentation, interaction and navigation in virtual 3D scenarios with force feedback.
- | Explain algorithmic and mathematical principles for tracking, rendering and collision detection.
- | Describe stability issues in VR and teleoperation systems due to latency, haptics, control and image quality.
- | Describe VR and haptic technologies and their ethical and social implications.
- | Describe critical thinking to identify strengths, weaknesses and quality of research

Research Project

- Recognize basic characteristics of haptic devices, perception and interfaces.
- Developing VR applications with haptic devices and analyzing haptic systems.
- Testing haptic systems and procedures and evaluating scientific information and contexts.
- Presenting own scientific results, applying methods of haptic systems.
- Implementing basic teleoperation controls, taking into account stability and ethical aspects.
- Designing tests and reflecting on ethical aspects of haptic VR technologies.
- Self-organization and application of linguistic and intercultural skills.

6.3 AVT - Audio- und Videotechnologien

Module ID	AVT
Module Name	Audio- und Videotechnologien
Type of Module	Elective Modules
Recognized Course	AVT - Audio and Video Technologies
ECTS credits	5
Language	deutsch, englisch bei Bedarf
Duration of Module	1 Semester
Recommended Semester	1-2
Frequency of Course	every winter term
Module Coordinator	Prof. Dr.-Ing. Klaus Ruelberg
Lecturer(s)	Prof. Dr.-Ing. Klaus Ruelberg (Professor Fakultät IME)

Learning Outcome(s)

Was:

Audio- und Videotechnologien kommen in vielfältiger Weise in der Medienindustrie zum Einsatz. Die Mediendistributionskette, die im Rahmen der LV als exemplarische Anwendung herangezogen und analysiert wird, umfasst verschiedene Technologien wie Datenkompression, Audio- und Videosignalverarbeitung, Fehlerschutzmechanismen, digitale Modaluationsverfahren.

Womit:

Studierende durchdringen eigenständig ausgewählte Themengebiete der Audio- und Videotechnologien, bereiten diese auf und halten einen Fachvortrag.

In einem in die LV integrierter Übungsblock entwickeln die Studierende eigenständig algorithmische Lösungskonzepte und setzen diese programmtechnisch um.

Wozu:

Die Studierenden können aktuelle Verfahren zur Audio- und Videocodierung entwickeln und in Hard- und Software implementieren. Sie können Mediendistributionsketten planen, beurteilen und umsetzen sowie fachliche Führungs- und Projektverantwortung übernehmen

Module Contents

Lecture / Exercises

Audio and video source coding

Channel models, channel coding (FEC & digital modulation principles)

Broadcast transmission systems (DVB - Digital Video Broadcasting)

implement audio and video coding methods in hard and software

develop algorithms and methods for audio and videocoding

develop and implement digital broadcasting systems

Exercises / Lab

Teaching and Learning Methods	▪ Lecture / Exercises ▪ Exercises / Lab
--------------------------------------	--

Examination Types with Weights	cf. exam regulations
---------------------------------------	----------------------

6.4 AVV - Algorithmen der Videosignalverarbeitung

Module ID	AVV
Module Name	Algorithmen der Videosignalverarbeitung
Type of Module	Elective Modules
Recognized Course	AVV - Algorithms for video signal processing
ECTS credits	5
Language	deutsch, englisch bei Bedarf
Duration of Module	1 Semester
Recommended Semester	1-2
Frequency of Course	every winter term
Module Coordinator	Prof. Dr.-Ing. Klaus Ruelberg
Lecturer(s)	Prof. Dr.-Ing. Klaus Ruelberg (Professor Fakultät IME)

Learning Outcome(s)

WAS:

Studierende formulieren gemeinsam mit dem Dozenten eine Aufgabenstellung/Forschungsfrage im Bereich der Videosignalverarbeitung. Unter Anwendung wissenschaftlicher Methoden analysieren sie die Aufgaben- bzw. Fragestellung eigenständig und entwickeln algorithmische Lösungsansätze.

WOMIT:

Eine Recherche der wissenschaftlichen Literatur bildet die Basis für die Studierenden, um die Aufgabenstellung inhaltlich zu durchdringen und einordnen zu können. Verschiedene, als geeignet erscheinende Lösungsansätze werden entwickelt und gegenübergestellt. Mithilfe geeigneter Entwicklungstools (z.B. Matlab) werden die entwickelten Algorithmen umgesetzt und bzgl. der Aufgabenstellung beurteilt. Die erzielten Ergebnisse des Projektes werden in einem Bericht zusammengefasst und im Rahmen eines Vortrages präsentiert.

WOZU:

Studierenden erhalten die Möglichkeit, sich tiefergehend mit einer wissenschaftlich/entwicklerischen Aufgabenstellung zu befassen.

Module Contents

Project

The students are introduced to different algorithmic approaches of video signal processing and get an overview of current applications and questions.

Analyzing, developing, implementing and evaluating algorithms for video signal processing

6.5 DBT - Digitale Bildtechnik

Module ID	DBT
Module Name	Digitale Bildtechnik
Type of Module	Elective Modules
Recognized Course	DBT - Digital Imaging
ECTS credits	5
Language	deutsch
Duration of Module	1 Semester
Recommended Semester	1-2
Frequency of Course	every winter term
Module Coordinator	Prof. Dr. Gregor Fischer
Lecturer(s)	Prof. Dr. Gregor Fischer (Professor Fakultät IME)

Learning Outcome(s)

Was:

Digitale Bildtechniken kommen in vielfältiger Weise in der Medienindustrie zum Einsatz. Die Bildkette digitaler Kameras, die im Rahmen der LV als exemplarische Anwendung herangezogen und analysiert wird, umfasst verschiedene Technologien wie Farbbildtechnik, HDR-Bildtechnik oder bildtechnische Verfahren.

Womit:

Durch die Vorlesung werden theoretische Kenntnisse der Bildtechnik exemplarisch vermittelt und in Zusammenhang mit den aktuellen Entwicklungen gebracht.

In einem in die LV integrierten begleitenden Praktikum entwickeln die Studierenden eigenständig algorithmische Lösungskonzepte und setzen diese in Matlab-Programme um.

Wozu:

Die Studierenden können aktuelle Verfahren zur digitalen Bildtechnik entwickeln und in Hard- und Software implementieren. Sie können bildtechnische Verfahren analysieren, beurteilen und umsetzen sowie fachliche Führungs- und Projektverantwortung übernehmen.

Module Contents**Lecture / Exercises**

- Color Imaging
 - Color capturing with electronic sensors
 - Color detectors
 - Demosaicking
 - Optical antialiasing filters
 - Color management for DSCs
 - ICC profiles computing with least squares fit
 - Testing color accuracy
 - Color appearance models
- Multispectral Imaging
 - Spectral sensitivities estimation by means of a general method to stabilize an instable set of linear equations
 - Statistics of natural spectra (Principal Components Analysis)
 - Spectral stimulus estimation
- HDR Imaging
 - HDR capturing technology
 - Contrast management
 - photo receptor model
 - unsharp masking
 - retinex algorithm
 - Automatic control
- Imaging Methods
 - Automatic white balancing
 - Grey world approach
 - Color-by-Correlation
 - Dichromatic reflection model
 - MTF management
 - MTF measurement
 - filter design for MTF optimization and sharpening
 - Adaptive sharpening
 - Denoising
 - Modelling of sensor noise
 - Locally adaptive smoothing filter
 - Wiener filtering
 - Bilateral filtering
 - Non-Local-Means filtering
 - Defect pixel / cluster correction
- Describe the function and effects of different imaging methods

Lab

- analyse optical and electronic imaging characteristics
- recognize and assess imaging defects
- realize imaging methods by software programming according to a given specification or scientific paper
- measure optical and electronic imaging characteristics or defects
- implement new imaging methods according to a given specification or scientific paper
- optimize imaging methods by basic mathematical optimization methods
- compare image quality of different imaging methods
- document results

6.6 DLO - Deep Learning und Objekterkennung

Module ID	DLO
Module Name	Deep Learning und Objekterkennung
Type of Module	Elective Modules
Recognized Course	DLO - image processing master
ECTS credits	5
Language	deutsch
Duration of Module	1 Semester
Recommended Semester	1-2
Frequency of Course	every summer term
Module Coordinator	Prof. Dr. Jan Salmen
Lecturer(s)	Prof. Dr. Jan Salmen (Professor Fakultät IME)

Learning Outcome(s)

Die Teilnehmer*innen können selbständig entscheiden, in welchen Situationen sich der Einsatz von Verfahren aus dem Bereich Deep Learning anbietet. Sie können eine entsprechende Lösung entwerfen, iterativ verbessern und praktisch umsetzen. Mögliche Probleme auf dem Weg dahin (z.B. beim Erstellen eines Datensatzes oder beim Training) können sie qualifiziert analysieren und passende Ideen zur Bewältigung entwickeln. Da sie einen guten Überblick über die langjährigen Entwicklungen in Forschung und Technik haben, können sie qualifiziert auf aktuelle Herausforderungen und offene Fragen im Zusammenhang mit Deep Learning schauen. Die Studierenden werden so in die Lage versetzt, sich sowohl im weiteren Studienverlauf als auch im Berufsleben kompetent mit Ansätzen zu beschäftigen, die auf Deep Learning beruhen.

Module Contents

Lecture

Deep learning algorithms and their application for object recognition in images.

Lab

training of a neural network

evaluation of the performance of a neural network

6.7 ESY - Eingebettete Systeme in der Medientechnologie

Module ID	ESY
Module Name	Eingebettete Systeme in der Medientechnologie
Type of Module	Elective Modules
Recognized Course	ESY - Embedded Systems in Media Technology
ECTS credits	5
Language	deutsch, englisch bei Bedarf
Duration of Module	1 Semester
Recommended Semester	1-2
Frequency of Course	every winter term
Module Coordinator	Prof. Dr.-Ing. Dirk Poggemann
Lecturer(s)	Prof. Dr.-Ing. Dirk Poggemann (Professor Fakultät IME)

Learning Outcome(s)

WAS: Studierende lernen aktuell verwendete Eingebettete Systeme in Kamerasystemen kennen, am Beispiel von FPGAs implementieren die Studierenden die Ansteuerung von Bildsensoren und Bilderarbeitungsalgorithmen für Kamerasysteme; Sie analysieren die Vor- und Nachteile unterschiedlicher Eingebetteter Systeme und aktuelle Trends in der Verwendung Eingebetteter Systeme in Kamerasystemen.

WOMIT: Der Dozent vermittelt die Grundlagen zu Eingebetteten Systemen und verwendeten Hardwarebeschreibungssprachen, im Praktikum werden in praktischen Versuchen Ansteuerung und Verarbeitung in FPGAs implementiert. In der Vorlesung werden aktuelle wissenschaftliche Veröffentlichungen zur Verwendung Eingebetteter Systeme in der Medientechnologie, z.B. für die Bildverarbeitung, besprochen.

WOZU: Ermöglicht das Erstellen technischer Systeme im Bereichameratechnik und die wissenschaftliche Auseinandersetzung mit Eingebetteten Systemen in der Medientechnologie.

Module Contents

Lecture

- Microprocessors
- FPGAs
- Hardware Description Languages
- Designprocess
- Test and Debug
- Control of CCD- and CMOS-Image-Sensors
- Image Processing Algorithms

Lab

exercises with FPGA-Board and CMOS-Image-Sensor

6.8 FTV - Forschungsprojekt virtuelle und erweiterte Realität

Module ID	FTV
Module Name	Forschungsprojekt virtuelle und erweiterte Realität
Type of Module	Elective Modules
Recognized Course	FTV - Research Project Virtual and Augmented Reality
ECTS credits	5
Language	englisch
Duration of Module	1 Semester
Recommended Semester	1-2
Frequency of Course	every term
Module Coordinator	Prof. Dr. Stefan Grünvogel
Lecturer(s)	Prof. Dr. Stefan Grünvogel (Professor Fakultät IME)

Learning Outcome(s)

WAS:

Selbstständig relevante wissenschaftliche Fragestellungen oder Hypothesen im Bereich VR / AR bewerten und entwickeln.

WOMIT:

Selbstständig wissenschaftliche Literatur im Bereich der virtuellen und erweiterten Realität durchdringen, zusammenfassen und präsentieren.

Fortgeschrittene Datenstrukturen und Algorithmen für VR/AR-Anwendungen erklären und vergleichen.

WOZU:

Um zukünftig wissenschaftlich zu arbeiten und wissenschaftlich Erkenntnisse anzuwenden und zu erweitern. (H2)

WAS:

Mit Hilfe verschiedener Methoden nach Antworten wissenschaftlicher Fragestellungen im Bereich VR / AR suchen.

WOMIT:

Es werden Werkzeuge und Methoden zur Entwicklung von VR/AR-Anwendungen verwendet und fortgeschrittene Technologien in VR und AR weiterentwickeln.

Dabei werden rechtliche und ethische Rahmenbedingungen und Nutzungsrechte berücksichtigt.

WOZU:

Es werden alle zukünftigen Handlungsfelder des Masterstudiengangs adressiert.

WAS:

Den eigenen Forschungsprozess selbst gestalten und reflektieren.

WOMIT:

Phasenübergreifende Qualitätssicherung und Anwendung wissenschaftlich fundierter und nachvollziehbarer Methoden sowie fachspezifischer Standards.

WOZU:

Dieses Learning-Outcome ist für das später wissenschaftliche Arbeiten notwendig.

WAS:

Forschungsergebnisse aufbereiten, kommunizieren und präsentieren.

WOMIT:

Das Zustandekommen der Forschungsergebnisse wird nachvollziehbar dokumentiert. In einer Abhandlung, die wissenschaftlichen Standards genügt, werden die Ergebnisse dargestellt und einem Fachpublikum präsentiert.

WOZU:

Um zukünftig wissenschaftliche Erkenntnisse zu erweitern und um in Führungs- bzw. Projektverantwortung in Fachteams kommunizieren zu können.

Module Contents**Project**

Explain and compare data structures and algorithms for VR/AR applications.

Describe multimodal user interfaces.

Describe input and output devices as well as specific hardware of virtual and augmented reality.

Explain algorithmic and mathematical basics.

Summarize and present scientific literature in the field of virtual and augmented reality.

Explain and compare advanced data structures and algorithms for VR/AR applications.

Use tools and methods for the development of VR/AR applications and further develop advanced technologies in VR and AR.

Legal and ethical framework conditions and rights of use will be considered.

Cross-phase quality assurance and application of scientifically sound and comprehensible methods as well as subject-specific standards.

The results of the research will be documented in a comprehensible manner. The results will be presented to a specialist audience in a treatise that meets scientific standards.

Teaching and Learning Project
Methods

Examination Types with Weights	cf. exam regulations
Workload	150 Hours
Contact Hours	12 Hours $\pm$ 1 SWS
Self-Study	138 Hours
Recommended Prerequisites	▪ Modul VER: Kenntnisse der Begriffe aus dem Bereich VR und AR sowie die Fertigkeit, selbstständig VR / AR - Anwendungen zu erstellen. ▪ Modul MCI: Grundlagen des Experiment Designs sowie der statistischen Auwertung. ▪ Knowledge of VR and AR terms and the competence to create VR / AR applications. Basics of experiment design and statistical evaluation.
Mandatory Prerequisites	Project requires attendance in the amount of: 3 Termine
Recommended Literature	▪ Relevante Foschungsliteratur. z.B IEEE VR, EuroVR, Siggraph, Sigchi usw.
Included in Elective Catalog	WMM - Wahlmodul
Included in Specialization	IMA - Interaktive Medienanwendungen
Use of the Module in Other Study Programs	FTV in Master Medientechnologie PO4

6.9 ITF - IT-Forensik

Module ID	ITF
Module Name	IT-Forensik
Type of Module	Elective Modules
Recognized Course	ITF - IT forensics
ECTS credits	5
Language	deutsch, englisch bei Bedarf
Duration of Module	1 Semester
Recommended Semester	1-2
Frequency of Course	every winter term
Module Coordinator	Studiengangsleiter(in) Master Technische Informatik (Informatik und Systems-Engineering)
Lecturer(s)	Jürgen Bornemann (Lehrbeauftragter)

Learning Outcome(s)

- **WAS** Studierende spüren digitale Beweise auf und stellen Sie zwecks Verwertbarkeit für weiterführende Analysen sicher,
- **WOMIT** indem sie anhand fallbezogener Aufgabenstellungen und mittels forensischer IT-Tools Schwachstellen entdecken und Beweise in Dateisystemen und IT-Infrastrukturen sichern,
- **WOZU** um im Berufsleben Gefahren vermeiden, erkennen und abwehren können und ggf. gutachterlich tätig zu werden.

Module Contents

Lecture / Exercises

Basic concepts of cyber security and digital forensics
 Typical vulnerabilities, threats and risks
 Dangers with mobile systems, home office, WLANs
 Basics and working methods of IT forensics
 Forensic documentation creation
 Common tools for forensic investigations
 Recognize and secure digital evidence
 Open source forensics
 File system forensics
 Forensic analysis of mobile systems
 Vulnerabilities, threats, attacks on network structures
 KALI Linux - Operating System for Vulnerability and Pentesting

Project

Students can work on case-related forensic tasks and incidents independently or in working groups using the knowledge they have acquired. They show how to secure, analyze and document digital evidence.

6.10 KOLL (MAKOLL) - Kolloquium zur Masterarbeit

Module ID	KOLL
Module Name	Kolloquium zur Masterarbeit
Type of Module	Mandatory Module
Recognized Course	MAKOLL - Colloquium
ECTS credits	3
Language	deutsch, englisch bei Bedarf
Duration of Module	1 Semester
Recommended Semester	3
Frequency of Course	every term
Module Coordinator	Studiengangsleiter(in) Master Technische Informatik (Informatik und Systems-Engineering)
Lecturer(s)	verschiedene Dozenten*innen (diverse lecturers)

Learning Outcome(s)

- Darstellung von Forschungsergebnissen in einer Präsentation in vorgegebenem engen zeitlichen Rahmen
- Fachliche und außerfachliche Bezüge der eigenen Arbeit darstellen und begründen
- Eigene Lösungswege und gewonnene Erkenntnisse darstellen und diskutieren

Module Contents***Colloquium***

The colloquium serves to determine whether the student is able to present the results of the Master's thesis, its technical and methodological foundations, interdisciplinary contexts and extracurricular references orally, to justify them independently and to assess their significance for practice

Teaching and Learning Methods

6.11 MAA - Masterarbeit

Module ID	MAA
Module Name	Masterarbeit
Type of Module	Mandatory Module
Recognized Course	MAA - Master thesis
ECTS credits	27
Language	deutsch, englisch bei Bedarf
Duration of Module	1 Semester
Recommended Semester	3
Frequency of Course	every term
Module Coordinator	Studiengangsleiter(in) Master Technische Informatik (Informatik und Systems-Engineering)
Lecturer(s)	verschiedene Dozenten*innen (diverse lecturers)

Learning Outcome(s)

Das Modul vermittelt folgende Kenntnisse und Fertigkeiten:

- Komplexe Aufgabenstellungen beurteilen
- Selbständiges Verfassen eines längeren wissenschaftlichen Textes
- Gute Praxis des wissenschaftlichen Arbeitens anwenden
- Darstellung von Forschungsergebnissen in Form eines wissenschaftlichen Artikels nach den Vorgaben gängiger Fachzeitschriften bzw. Konferenzen
- Selbständiges und systematisches Bearbeiten einer komplexen ingenieurwissenschaftlichen Aufgabenstellung unter Verwendung wissenschaftlicher Methoden
- Lösungsstrategien entwickeln und umsetzen
- Wissenschaftliche Literatur recherchieren und auswerten
- Eigene Arbeit bewerten und einordnen

Individuelle Vereinbarung des Studierenden mit einem Dozenten der MT bzw. F07 über eine qualifizierte Ingenieurstätigkeit mit einer studiengangsbezogenen Aufgabenstellung mit wissenschaftlichem Anspruch. Die Masterarbeit kann auch extern in einer Forschungsorganisation, einem Wirtschaftsunternehmen o.ä. durchgeführt werden. Die Betreuung erfolgt durch den Dozenten. Die Masterarbeit adressiert die Entwicklung komplexer Medientechnologien unter interdisziplinären Bedingungen (HF1) und das wissenschaftliche Arbeiten um wissenschaftliche Erkenntnisse zu erweitern (HF2)."

Module Contents

Thesis

The Master's thesis is a written assignment. It should show that the student is capable of independently working on a topic from his or her subject area within a specified period of time, both in its technical details and in its interdisciplinary contexts, using scientific and practical methods. Interdisciplinary cooperation can also be taken into account in the final thesis.

6.12 MCI - Mensch-Computer-Interaktion

Module ID	MCI
Module Name	Mensch-Computer-Interaktion
Type of Module	Elective Modules
Recognized Course	MCI - Human Computer Interaction
ECTS credits	5
Language	deutsch, englisch bei Bedarf
Duration of Module	1 Semester
Recommended Semester	1-2
Frequency of Course	every summer term
Module Coordinator	Prof. Dr. Jonas Schild
Lecturer(s)	Prof. Dr. Jonas Schild (Professor Fakultät IME)

Learning Outcome(s)

WAS:

Das Modul vermittelt folgende Kenntnisse und Fertigkeiten:

- Grundlagen der Mensch-Computer-Interaktion: Definitionen, Normen, Modelle, Prinzipien
- Interaktive Systeme aus Hard- und Software konzipieren, implementieren und analysieren
- User Experience verstehen und Prinzipien des UX Engineerings anwenden
- Wiss. Fragestellungen vor einem Forschungshintergrund der HCI entwickeln
- Geeignete Nutzerstudien nach wiss. und ethischen Kriterien konzipieren, planen und durchführen
- statistische und deskriptive Daten wissenschaftlich analysieren, veranschaulichen und diskutieren
- in heterogenen Teams zusammenarbeiten, sich koordinieren und präsentieren

WOMIT:

Die Kompetenzen werden zunächst über eine Vorlesung durch die Dozenten vermittelt und danach im Praktikum anhand konkreter Aufgabenstellung von den Studierenden vertieft. Im seminaristischen Teil der Lehrveranstaltung recherchieren die Studierenden zu vorgegebenen Themen anhand von Fachartikeln und weiteren Informationsquellen über neue Konzepte der Mensch-Computer Interaktion und stelle diese dar in einer Präsentation dar.

WOZU:

Die Studierenden erlernen das eigenständige Durchführen von Forschungsprozesse auf dem Gebiet der Mensch-Computer-Interaktion, um im interdisziplinären Team auf Grundlage von selbst entwickelten komplexen, interaktiven Systemen (HF1) aktuelle Fragestellungen aus dem Bereich der Mensch-Computer-Interaktion wissenschaftlich untersuchen (HF2) und dabei die Effektivität und Wirkung von interaktiven Systemen auf Nutzende testen und einschätzen zu können (HF4).

Module Contents
Lecture

Models and design principles of interactive systems
 Principles of context-, task- and user-oriented development of interactive systems
 Basics of barrier-free access to interactive systems
 Relevant standards and guidelines: EN ISO 9241, ISO 14915, HHS
 Control options: Dedicated input/output devices, voice control, gesture control
 Best Practices and Style Guides: Desktop / Web / Mobile / Hybrid Applications
 Usability evaluation (analytical/empirical, heuristics, expert interviews, focus groups, user studies)
 Evaluation methods (thinking aloud, eye-tracking, (semi-)structured interviews)

Experimental Research: Research Question, Hypotheses, Errors of 1st and 2nd Kind
 Experiment Design: Between Group, Within Group, Split-Plot, Reliability of Experimental Results
 Statistical analysis: scale levels, descriptive statistics, T-tests, ANOVA, regression, correlation
 Surveys: sampling and sample selection, sources of error, questionnaires, evaluation of surveys

Lab

Capturing and understanding textual tasks
 Recording tasks and creating models from them
 Implementing UI components on the basis of the models created
 Testing and securing developments
 Checking and evaluating work results of comolitions
 Applying MCI research methods and terminology

6.13 MP - Masterprojekt

Module ID	MP
Module Name	Masterprojekt
Type of Module	Mandatory Module
Recognized Course	MP - Master's project
ECTS credits	15
Language	deutsch und englisch
Duration of Module	1 Semester
Recommended Semester	2
Frequency of Course	every term
Module Coordinator	Studiengangsleiter(in) Master Medientechnologie (undefined)
Lecturer(s)	verschiedene Dozenten*innen (diverse lecturers)

Learning Outcome(s)

Ablauf eines Projektes strukturieren
 Technische Informationen zu Projektgegenstand beschaffen
 Technische Aufgabe in sinnvolle Teilaufgaben zerlegen
 Spezifikation des Projektgegenstandes erstellen
 Software strukturiert erstellen (spezifizieren, erstellen, testen, dokumentieren)
 Gesamtsystem erstellen
 Benötigte technische Informationen identifizieren
 Technische Entscheidungen nach dem Stand der Technik und Wissenschaft treffen
 Komplexe Aufgaben arbeitsteilig bearbeiten
 Projektfortschritt kontrollieren, notwendige Korrekturmaßnahmen identifizieren und umsetzen
 Projektergebniss einem größeren Publikum präsentieren

6.14 PAP - Parallele Programmierung

Module ID	PAP
Module Name	Parallele Programmierung
Type of Module	Elective Modules
Recognized Course	PAP - Parallel Programming
ECTS credits	5
Language	deutsch, englisch bei Bedarf
Duration of Module	1 Semester
Recommended Semester	1-2
Frequency of Course	every summer term
Module Coordinator	Prof. Dr.-Ing. Arnulph Fuhrmann
Lecturer(s)	Prof. Dr.-Ing. Arnulph Fuhrmann (Professor Fakultät IME)

Learning Outcome(s)

Medientechnische und interaktive Systeme beinhalten rechenintensive Berechnungen. Um Anforderungen an die Verarbeitung in Echtzeit erfüllen zu können, sind daher Kompetenzen und Wissen über die Grundlagen für die Analyse (HF1, HF2), den Entwurf (HF1, HF2), die Implementierung (HF1, HF2) und die Bewertung (HF1, HF2) paralleler Computerprogramme erforderlich.

Folgende Kenntnisse und Kompetenzen werden im Detail vermittelt:

- Grundlegende Konzepte, Modelle und Technologien der parallel Verarbeitung benennen, strukturieren, einordnen und abgrenzen
- Aufgabenstellungen in Bezug auf die Programmierung paralleler Programme analysieren und strukturieren, einschlägige parallele Hardwarearchitektur zuordnen und auf Paralleldesign übertragen
- Parallele Programme unter Einsatz geeigneter Tools analysieren und Ergebnisse nachvollziehbar darstellen
- Leistungsfähigkeit paralleler Programme abschätzen und analysieren
- Information aus englischen Originalquellen und Standards ableiten

Kenntnisse und Basisfertigkeiten werden in der Vorlesung vermittelt. Begleitend dazu werden in den Übungen Kompetenzen und Fertigkeiten ausgebaut und inhaltliche Themen vertieft.

Module Contents

Lecture

- Basic concepts, models and technologies of parallel processing (parallelism, concurrency, SISD, SIMD, MISD, MIMD, loose- and closely coupled systems, distributed systems)
- Parallel performance measures (speedup, efficiency)
- Architecture of GPUs
- Parallel Algorithms for GPUs

Exercises / Lab

- Analyze and structure tasks related to programming parallel programs, assign relevant parallel hardware architecture and transfer to parallel design
- Implement parallel programs (multicore hardware with threads and GPUs)
- Analyze parallel programs using suitable tools and present results in a comprehensible way
- Estimate and analyze performance of parallel programs
- Derive information from original English sources and standards

Teaching and Learning Methods	▪ Lecture ▪ Exercises / Lab

6.16 TSVP - Technologien und Systeme der Videoproduktion

Module ID	TSVP
Module Name	Technologien und Systeme der Videoproduktion
Type of Module	Elective Modules
Recognized Course	TSVP - Technologies and Systems of Video Production
ECTS credits	5
Language	deutsch, englisch bei Bedarf
Duration of Module	1 Semester
Recommended Semester	1-2
Frequency of Course	every summer term
Module Coordinator	Prof. Dr.-Ing. Ulrich Reiter
Lecturer(s)	Prof. Dr.-Ing. Ulrich Reiter (Professor Fakultät IME)

Learning Outcome(s)

WAS: Studierende analysieren aktuelle und zukünftige Produktionstechnologien und Systeme audiovisueller Medien hinsichtlich unterschiedlicher Faktoren wie Anwendbarkeit, Potential, Kosten/Nutzen, etc. in verschiedenen exemplarischen Anwendungsszenarien. Sie lernen, Technologien aus teilweise anderen Anwendungsgebieten mit Hilfe wissenschaftlicher Methoden auf ihre Einsatzmöglichkeit in der Medienproduktion hin zu untersuchen. Die kritische Auseinandersetzung mit der technischen Literatur und die Anwendung der Regeln guten wissenschaftlichen Arbeitens befähigt sie, wissenschaftliche begründete Aussagen zu treffen.

WOMIT: Dazu führen sie in kleinen Teams eine Literaturrecherche sowie evtl. Befragungen und Interviews mit Experten durch, mit Hilfe derer sie die betreffenden Technologien verstehen und eine Einordnung vornehmen können. Zum Abschluss des Projektes fertigen sie einen Bericht an und halten einen Fachvortrag.

WOZU: Studierenden wird ein kritischer Umgang mit neuen Technologien ermöglicht, da sie wissenschaftlich arbeiten können. Sie können komplexe Technologien analysieren, daraus technologische Empfehlungen ableiten und somit fachliche Führungs- und Projektverantwortung übernehmen.

Module Contents

Project

- mastering of methods of good scientific practice, especially with respect to information retrieval as well as to documentation and presentation of expert knowledge
- expert knowledge in specific topics from the field of Technologies and Systems for Audiovisual Media Production, as well as from neighboring disciplines that are already or will become potentially relevant for the field of media production technologies

Teaching and Learning Methods

Project

Examination Types with Weights

cf. exam regulations

6.17 VAE - Virtual Acoustic Environments

Module ID	VAE
Module Name	Virtual Acoustic Environments
Type of Module	Elective Modules
Recognized Course	VAE - Virtual Acoustic Environments (VAE)
ECTS credits	5
Language	englisch
Duration of Module	1 Semester
Recommended Semester	1-2
Frequency of Course	every summer term
Module Coordinator	Prof. Dr.-Ing. Christoph Pörschmann
Lecturer(s)	Prof. Dr.-Ing. Christoph Pörschmann (Professor Fakultät IME)

Learning Outcome(s)

What: The students learn the basic concepts, the technology and perception-related aspects of virtual acoustic environments. The course will be strongly related to research aspects and projects

How: The students apply their knowledge on Signal Processing, Audio, and in the field of VR on different aspects of Virtual Acoustic Environments. Actual trends in research and state of the art applications will be integrated, tested, analyzed and evaluated.

Aim: The students shall be able to work on research topics which consider topics which are scientifically new and relevant. Aspects of scalability and commercialization play a role

Module Contents

Lecture

The basic concepts of headphone-based or loudspeaker-based VR-systems are introduced

Project

In one specific topic of Virtual Acoustic Environments the students shall get deep know-how on the technology and apply it to a practical problem and present the results

Lab

6.18 VAO - Forschungsprojekt virtuelle Akustik und objektbasiertes Audio

Module ID	VAO
Module Name	Forschungsprojekt virtuelle Akustik und objektbasiertes Audio
Type of Module	Elective Modules
Recognized Course	VAO - Research Project in Virtual Acoustics and Object Based Audio
ECTS credits	5
Language	deutsch, englisch bei Bedarf
Duration of Module	1 Semester
Recommended Semester	1-2
Frequency of Course	every term
Module Coordinator	Prof. Dr.-Ing. Ulrich Reiter
Lecturer(s)	Prof. Dr.-Ing. Ulrich Reiter (Professor Fakultät IME)

Learning Outcome(s)

WAS: Studierende lernen Technologien aus den Themengebieten Virtuelle Akustik und Objektbasierte Audioproduktion zu analysieren, zu implementieren und anzuwenden. Sie lernen, fachspezifische Aufgabenstellungen mit Hilfe wissenschaftlicher Methoden und in einem begrenzten Zeitraum zu lösen. Die kritische Auseinandersetzung mit den gefundenen Lösungen und die Anwendung der Regeln guten wissenschaftlichen Arbeitens befähigt sie, wissenschaftliche Aussagen zu treffen.

WOMIT: Dazu führen sie in kleinen Teams Projekte durch, in denen sie die kennengelernten Technologien exemplarisch implementieren und/oder anwenden. Zum Abschluss des Projektes fertigen sie eine Dokumentation an und halten einen Fachvortrag.

WOZU: Studierenden wird ein kritischer Umgang mit neuen Technologien ermöglicht, da sie wissenschaftlich arbeiten können. Sie können komplexe Technologien entwickeln und fachliche Führungs- und Projektverantwortung übernehmen.

Module Contents

Project

- development of a deep understanding for the properties of object based audio technologies
- knowledge of simulation methods of virtual acoustics
- confident handling of object based audio technologies and methods of virtual acoustics
- mastering of methods of good scientific practice, especially with respect to information retrieval as well as to documentation and presentation of project results

Contact Hours	12 Hours $\pm$ 1 SWS
Self-Study	138 Hours
Recommended Prerequisites	- knowledge of acoustics / room acoustics as well as audio engineering / digital audio technology - basic knowledge of audio signal processing and algorithms
Mandatory Prerequisites	Project requires attendance in the amount of: 80 % der Termine und Präsentation
Recommended Literature	▪ diverse aktuelle Papers zum Thema

Included in Elective Catalog	WMM - Wahlmodul
Included in Specialization	TSA - Technologien und Systeme audiovisueller Medien
Use of the Module in Other Study Programs	VAO in Master Medientechnologie PO4
Specifics and Notes	
Last Update	19.7.2025, 14:32:16

6.19 VER - Virtuelle und erweiterte Realität

Module ID	VER
Module Name	Virtuelle und erweiterte Realität
Type of Module	Elective Modules
Recognized Course	VER - Virtual and Augmented Reality
ECTS credits	5
Language	deutsch, englisch bei Bedarf
Duration of Module	1 Semester
Recommended Semester	1-2
Frequency of Course	every winter term
Module Coordinator	Prof. Dr.-Ing. Arnulph Fuhrmann
Lecturer(s)	▪ Prof. Dr.-Ing. Arnulph Fuhrmann (Professor Fakultät IME) ▪ Prof. Dr. Stefan Grünvogel (Professor Fakultät IME)

Learning Outcome(s)

WAS:

Das Modul vermittelt folgende Kenntnisse und Fertigkeiten:

- Virtual- und Augmented-Reality-Anwendungen konzipieren, aufbauen und bewerten
- Interaktions und Navigationsverfahren erstellen
- Basistechnologien der virtuellen und erweiterten Reality weiterentwickeln
- Werkzeuge und Methoden zur Entwicklung von VR/AR-Anwendungen verwenden
- Algorithmische und mathematische Grundlagen von VR/AR anwenden

WOMIT:

Die Kompetenzen werden zunächst über eine Vorlesung durch die Dozenten vermittelt und danach im Praktikum anhand konkreter Aufgabenstellung von den Studierenden vertieft. Im seminaristischen Teil der Lehrveranstaltung recherchieren die Studierenden zu vorgegebenen Themen anhand von Fachartikeln und weiteren Informationsquellen über neue Konzepte der virtuellen und erweiterten Realität und stelle diese dar in einer Präsentation dar.

WOZU:

Die sichere Anwendung der Grundlagen der virtuellen und erweiterten Realität ist Voraussetzung für die Entwicklung komplexer interaktiver medientechnischer Systeme (HF1). Weiterhin erlaubt das Grundlagenwissen die Bewertung bestehender Systeme und das wissenschaftliche Arbeiten in diesem Gebiet (HF2).

Module Contents**Lecture**

Explain terms from the field of virtual and augmented reality
Explain and compare data structures and algorithms for VR/AR applications
3D data formats
Spatial data structures
Describing Multimodal User Interfaces
Selection of 3D objects
Manipulation of 3D objects
Navigation in virtual scenes
system control
Describe input and output devices and specific virtual and augmented reality hardware
display technologies
Stereo Displays
Autostereoscopic Displays
projection solutions
Wearable Displays
Head Mounted Displays
Handheld Displays
See-through Displays
Workbench
Cave
Tiled Displays
3D-Audio
Force Feedback Devices
Haptic feedback
input devices
controller
data gloves
locomotion devices
Explain algorithmic and mathematical basics
stereoscopy
tracking
capture of position and orientation: Degrees of freedom
tracking technologies
Mechanical
Optical
Electromagnetic
ultrasound
inertial
eye tracking
head tracking
object tracking
Markerless Tracking
Marker-Based Tracking
rendering
management of large 3D scenes
haptic rendering
stereo rendering
real-time rendering
collision detection
intersections between primitives
Discrete and continuous collision detection
acceleration data structures
collision response

Lab

- Design, build and evaluate virtual environments and augmented reality applications
- Creating Interaction and Navigation Procedures
- Further develop fundamental technologies of virtual and augmented reality
- Use tools and methods to implement VR/AR applications
- Apply algorithmic and mathematical principles of VR/AR
- understand and grasp textual tasks
- Testing and debugging your own application

Seminar

Apply Algorithmic and Mathematical fundamentals
 Check interaction and navigation procedures
 Independently obtaining and summarizing scientific literature
 Present and discuss new concepts of virtual and augmented reality

Teaching and Learning Methods	▪ Lecture ▪ Lab ▪ Seminar
--------------------------------------	---

Examination Types with Weights cf. exam regulations

Workload 150 Hours

Contact Hours 45 Hours $\pm$ 4 SWS

Self-Study 105 Hours

Recommended Prerequisites Computer Graphics
Computer Animation

Mandatory Prerequisites Lab requires attendance in the amount of: 2 Termine

Recommended Literature

- R. Dörner et al., Virtual und Augmented Reality (VR/AR): Grundlagen und Methoden der Virtuellen und Augmentierten Realität, Springer Vieweg, 2019
- Schmalstieg und Höllerer, Augmented Reality – Principles and Practice, Addison Wesley, 2016
- T. Akenine-Möller, et al., Real-Time Rendering Fourth Edition, Taylor & Francis Ltd., 2018
- J. Jerald, The VR Book: Human-Centered Design for Virtual Reality, Acm Books, 2015

Included in Elective Catalog WMM - Wahlmodul

Included in Specialization IMA - Interaktive Medienanwendungen

Use of the Module in Other Study Programs

- VER in Master Communication Systems and Networks PO3
- VER in Master Communication Systems and Networks PO4
- VER in Master Medientechnologie PO4
- VER in Master Technische Informatik PO3
- VER in Master Informatik und Systems-Engineering PO1

Specifics and Notes

Last Update 19.7.2025, 14:32:16

7. Electives Catalogs

The following shows which modules can be selected in a particular elective area. The following notes and regulations apply to all elective areas:

- **When choosing modules from elective catalogs, the conditions formulated in Specializations also apply.**
- The semester in which elective modules of an elective catalog can typically be taken can be found in the study plans.
- As a rule, modules are only offered in either the summer or winter semester. This means that any required accompanying examination can only be taken in this semester. The summative examinations for modules in Faculty 07 are usually offered in the examination period after each semester.
- A completed module is recognized for a maximum of one elective area, even if it is listed in several elective areas.
- There is an admission restriction for some modules. More information on this can be found in the announcements on admission restrictions.
- Registration and admission to non-faculty modules are subject to deadlines and other conditions set by the faculty or university offering the module. Their admission cannot be guaranteed. Students must contact the relevant external lecturer in good time to find out whether they are allowed to take part in an external module and what they need to do to register and participate.
- Upon application, a suitable modules can be added to the elective area. Such an application must be submitted informally to the head of degree program at least four months before the planned participation in that module. The examination board decides on the acceptance of the application in consultation with the head of degree program and suitable teaching staff. A study achievement to be recognized
 - must fit in with the intended graduate profile of the degree program and contribute to its achievement,
 - must be oriented towards learning outcomes and must not serve solely to impart knowledge,
 - must correspond to the qualification level of a Master's degree program,
 - must represent a meaningful increase in competence against the background of the intended course of study,
 - must have been completed by an examination and
 - must not be identical in terms of content and learning outcomes to coursework that has already been completed.
- Modules are not listed below,
 - which in the past were only recognized for an elective catalog as part of individual recognition procedures or
 - which in the past were only recognized for an elective catalog as part of a stay abroad and the associated individual learning agreement.

Stays abroad

- Students who have integrated a stay abroad into their studies and have completed coursework at a foreign university can have this recognized upon application and with the approval of the examination board.
- A Learning Agreement must be concluded with the Faculty's Recognition Officer before the start of the stay abroad. In particular, it is agreed for which mandatory modules or elective catalogs the coursework completed abroad will be recognized.

7.1 WMM - Wahlmodul

Hier können die angebotenen Wahlmodule sowie, nach vorheriger Genehmigung, sonstige Module aus dem Angebot der Fakultät gewählt werden. Drei der im Rahmen der Wahlmodule WMM1-6 gewählten Module müssen aus der Liste der Module eines Studienschwerpunktes stammen Aus dem Institut für Medien- und Phototechnik ist z.Z. folgendes Angebot für das Sommersemester vorgesehen:

You must select modules of 30 ECTS credit points in total out of this catalog.

Modules of the faculty

Module ID	Module Name	Rotation	ECTS	
AVT	Audio- und Videotechnologien	W	5	TSA
AVV	Algorithmen der Videosignalverarbeitung	W	5	BIL
DBT	Digitale Bildtechnik	W	5	BIL
DLO	Deep Learning und Objekterkennung	S	5	BIL
ESY	Eingebettete Systeme in der Medientechnologie	W	5	BIL

Module				
ID	Module Name	Rotation	ECTS	
FTV	Forschungsprojekt virtuelle und erweiterte Realität	S+W	5	IMA
ITF	IT-Forensik	W	5	
MCI	Mensch-Computer-Interaktion	S	5	IMA
PAP	Parallele Programmierung	S	5	IMA
TSVP	Technologien und Systeme der Videoproduktion	S	5	TSA
VAE	Virtual Acoustic Environments	S	5	IMA
VAO	Forschungsprojekt virtuelle Akustik und objektbasiertes Audio	S+W	5	TSA
VER	Virtuelle und erweiterte Realität	W	5	IMA

8. Specializations

The following section outlines the major fields of study defined in this degree program (see also §24 of the examination regulations). The following information and regulations apply to all major fields of study:

- A major field of study is considered successfully completed if at least 3 of the included modules have been successfully accomplished.
- The completed areas of specialization are listed in a separate appendix to the degree certificate; if there is more than one, only parts of it may be listed upon request to the Examination Office.
- Upon request, a major field of study can be supplemented with additional suitable modules. Such a request must be submitted informally to the program director at least six months before planned participation in a module to be supplemented. The examination board decides on the acceptance of the request in consultation with the program director and appropriately qualified teaching staff.

8.1 BIL - Bildtechnologie

Anhand industrienaher Fallbeispiele werden in einem projektbezogenen Lehrkonzept Methoden und Techniken entwickelt, die intelligente Bild- und Videoanwendungen inkl. Hard- und Software von der Bildsensorik bis hin zu Objekterkennung und -verfolgung umsetzen.

Insbesondere werden optische und elektronische Kameraeigenschaften modelliert, und diese Modelle zur Erzeugung von Trainingsdaten zu Deep Learning von neuronalen Faltungsnetzen genutzt. Zu den Highlights des Schwerpunkts Bildtechnik gehören: - Systemdesign kameratechnischer Systeme mit Controller- oder FPGA-basierter Steuerung der Bildsensorik und schneller Verarbeitung der Bildsignale - Verfahren zur Bildverbesserung (Farboptimierung, Image Enhancement) und Computational Photography

(Mehrfachbildaufnahmetechniken wie HDR-Imaging oder Image Stacking) - Verfahren zur Bild- und Videokompression inkl.

Bewegungsprediktion - Lokal adaptive Filterfunktionen (Rauschunterdrückung, Verschärfung) und Objekterkennung (Gesichter, Himmel, Vegetation ...) mit neuronalen Faltungsnetzen (CNN)

Modules of the faculty

Abbr.	Module Name	Rotation	ECTS
AVV	Algorithmen der Videosignalverarbeitung	W	5
DBT	Digitale Bildtechnik	W	5
DLO	Deep Learning und Objekterkennung	S	5
ESY	Eingebettete Systeme in der Medientechnologie	W	5

8.2 IMA - Interaktive Medienanwendungen

In diesem Profil beschäftigen wir uns mit der Entwicklung von Algorithmen und Datenstrukturen zur Erzeugung von interaktiven Medienanwendungen, insbesondere im Bereich Virtual und Augmented Reality. Wir untersuchen aktuelle Themen zum Thema Mensch-Computer-Interaktion und führen eigenständige Forschungsprojekte durch.

Modules of the faculty

Abbr.	Module Name	Rotation	ECTS
FTV	Forschungsprojekt virtuelle und erweiterte Realität	S+W	5
MCI	Mensch-Computer-Interaktion	S	5
PAP	Parallele Programmierung	S	5
VAE	Virtual Acoustic Environments	S	5
VER	Virtuelle und erweiterte Realität	W	5

8.3 TSA - Technologien und Systeme audiovisueller Medien

In diesem Profil werden aktuelle Technologien und Systeme audiovisueller Medien im Rahmen eines projektbezogenen Lehrkonzeptes exemplarisch untersucht, angewandt und weiterentwickelt. Im Fokus stehen dabei insbesondere: - Verfahren der Virtuellen Akustik, die interaktiv einen realitätsgetreuen räumlichen Klangeindruck vermitteln können, sowie zugehörige objektbasierte Audiokonzepte und Simulationsmethoden - komplexe Technologien und Systeme der Video-/Medien-Produktion, ihr Zusammenspiel sowie die daraus resultierenden Anforderungen und Workflows - Verfahren und Technologien zur Distribution von Mediendaten (Video- und Audiokompression, Übertragung, Multiplexing ...)

Modules of the faculty

Abbr.	Module Name	Rotation	ECTS
AVT	Audio- und Videotechnologien	W	5
TSVP	Technologien und Systeme der Videoproduktion	S	5
VAO	Forschungsprojekt virtuelle Akustik und objektbasiertes Audio	S+W	5

9. Examination Types

The forms of examination referenced in the module descriptions are explained in more detail below. The explanations are taken from the examination regulations, §19ff. In case of deviations, the text of the examination regulations applies.

(Digital) Written exam

Written, paper-based or digitally supported examination. Details are regulated in §19 of the examination regulations.

Oral examination

Examination to be taken orally. Details are regulated in §21 of the examination regulations.

Oral contribution

See §22, para. 5 of the examination regulations: An oral contribution (e.g. paper, presentation, negotiation, moderation) serves to determine whether students are capable of independently working on a practice-oriented task within a specified period of time using scientific and practical methods and presenting it in a technically appropriate manner by means of verbal communication. This also includes answering questions from the auditorium regarding the oral presentation. The duration of the oral presentation is determined by the examiner at the beginning of the semester. The facts relevant to the grading of the oral presentation are to be recorded in a protocol; students should also submit the written documents relating to the oral presentation for documentation purposes. Students must be notified of the grade no later than one week after the oral presentation.

Technical discussion

See §22, Para. 8 of the examination regulations: A technical discussion serves to determine professional competence, understanding of complex technical contexts and the ability to solve problems analytically. Students and examiners have roughly equal speaking time in the technical discussion in order to enable a discursive technical exchange. One or more discussions are held with an examiner during the semester or in summary form. Students should present and explain practice-related technical tasks, problems or project plans from the degree program and explain the relevant technical background, theoretical concepts and methodological approaches for processing the tasks. Possible solutions, procedures and considerations for solving the problem must be discussed and justified. The facts relevant to the grading of the technical discussion must be recorded in a protocol.

Project work

See §22, Para. 6 of the examination regulations: The project work is an examination that consists of independently working on a specific problem under supervision using scientific methodology and documenting the results. In addition to the quality of the answer to the question, the organizational and communicative quality of the implementation, such as slides, presentations, milestones, project plans, meeting minutes, etc., are also relevant for assessment.

Lab report

See §22, para. 10 of the examination regulations: An internship report (e.g. experimental protocol) serves to determine whether students are capable of independently carrying out a practical laboratory task within a specified period of time, as well as documenting, evaluating and reflecting on the process and results in writing. Preparatory homework may be required before the actual experiment is carried out. Technical discussions may take place during or after the experiment. Internship reports can also be admitted to the examination in the form of group work. Students must be notified of the assessment of the practical placement report no later than six weeks after submission of the report.

Exercise lab

See §22, para. 11 of the examination regulations: The examination form "practical training" tests the technical skills in the application of the theories and concepts learned in the lecture as well as practical skills, for example the use of development tools and technologies. For this purpose, several tasks are set during the semester, which are to be solved either alone or in group work, on site or as homework by a given deadline. The solutions to the tasks must be submitted by the students in (digital) written form. The exact criteria for passing the examination will be announced at the beginning of the corresponding course.

Exercise lab under examination conditions

See §22, para. 11, sentence 5 of the examination regulations: A "practical training course under examination conditions" is a practical training course in which the tasks are to be completed within the time frame and under the independent conditions of an examination.

Term paper

See §22, para. 3 of the examination regulations: A term paper (e.g. case study, research) serves to determine whether students are capable of independently completing a specialist task in written or electronic form using scientific and practical methods within a specified period of time. The topic and scope (e.g. number of pages of the text section) of the term paper are determined by the examiner at the beginning of the semester. A declaration of independence must be signed and submitted by the candidate. In addition, technical discussions may be held.

Learning portfolio

A learning portfolio documents the student competence development process by means of presentations, essays, excerpts from internship reports, tables of contents of term papers, notes, to-do lists, research reports and other performance presentations and learning productions, summarized as so-called "artefacts". The learning portfolio only becomes an examination item in conjunction with the student's reflection (in writing, orally or in a video) on the use of these artifacts to achieve the learning objective previously made transparent by the examiner. During the creation of the learning portfolio, feedback on development steps and/or artifacts is given over the course of the semester. A revised form of the learning portfolio - in handwritten or electronic form - is submitted as the examination result following the feedback.

Single / Multiple choice

See §20 of the examination regulations.

Access colloquium

See §22, para. 12 of the examination regulations: An entrance colloquium serves to determine whether the students fulfill the specific requirements to be able to work independently and safely on a defined practical laboratory task using scientific and practical methods.

(Intermediate) Certificate

See §22, para. 7 of the examination regulations: A test/intermediate test certifies that the student has completed a piece of coursework (e.g. draft) to the required standard. The scope of work to be completed and the required content and requirements can be found in the respective module description in the module handbook and in the assignment.

Open book preparation

The open book assignment (OBA) is a short term paper and therefore an unsupervised written or electronic examination. It is characterized by the fact that, according to the examiner's declaration of aids, all aids are generally permitted. Special attention is drawn to the safeguarding of good scientific practice through proper citation etc. and the requirement of independence in the performance of each examination.

Thesis

Bachelor's or Master's thesis as defined in the examination regulations §25ff: The Master's thesis is a written assignment. It should show that the student is capable of independently working on a topic from their subject area within a specified period of time, both in its technical details and in its interdisciplinary contexts, using scientific and practical methods. Interdisciplinary cooperation can also be taken into account in the final thesis.

Colloquium

Colloquium for the Bachelor's or Master's thesis as defined in the examination regulations §29: The colloquium serves to determine whether the student is able to present the results of the Master's thesis, its technical and methodological foundations, interdisciplinary contexts and extracurricular references orally, to justify them independently and to assess their significance for practice.

10. Profile Module Matrix

The following section describes the extent to which the modules of the degree program support and develop the competencies and fields of action of the study program as well as certain study program criteria as defined by the University of Applied Science TH Köln.
